

DESCRIPTION

Typology	Partition system
Structure	Painted or veneered aluminium

STRUCTURE

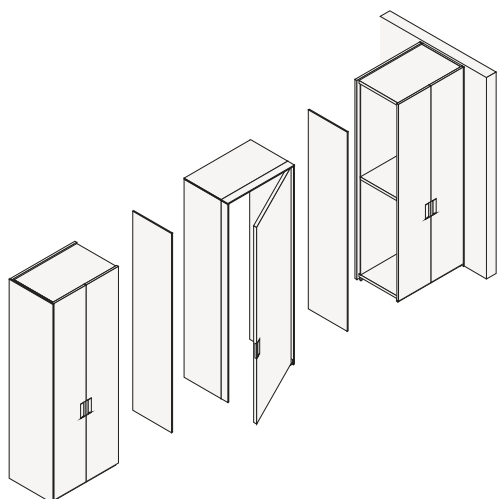

Components

Pivot is a system of single or double doors, pivot opening, composed by a portal integrated with the wardrobes of the Senzafine system and the Surfacepanels to the back of the wardrobe or with the tall units of the kitchen collection. The pivot door is a door which opens and closes by rotating around a vertical axis consisting of two pins. A frame for the door fixing is applied to the front or rear part of the portal. Pivot doors follow finishes and handles of the wardrobe collection Senzafine or of the Kitchen Collection, to grant perfect visual continuity when combined together.

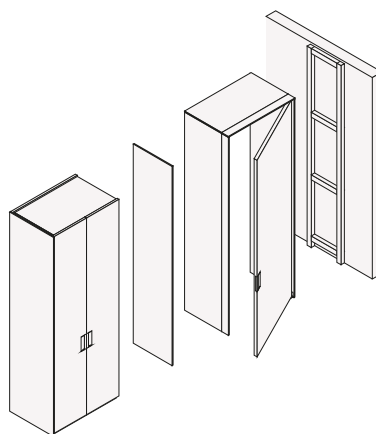

Compositional solutions

Pivot between two centre cabinets

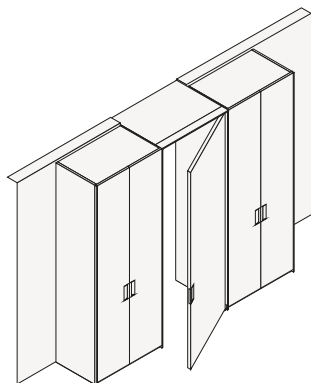

To combine portal and wardrobe it is necessary to use a 1/2" thick internal side, arranged to fix the jamb, instead of the standard lateral side.

Pivot between cabinet and wall

To combine portal and wall it is necessary to use a wall frame arranged to fix the jamb. Frame with telescopic adjustment, thickness from 1 1/2" to 2 1/4".

Pivot between cabinet and wall

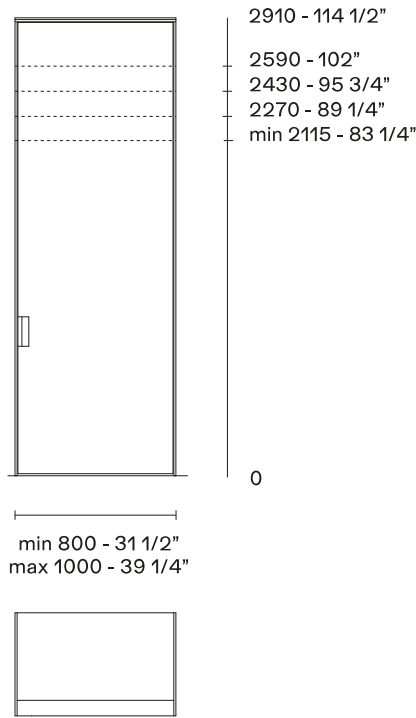

Only with wall wardrobes and passage with Pivot door the back panel is standard.

MODULARITY

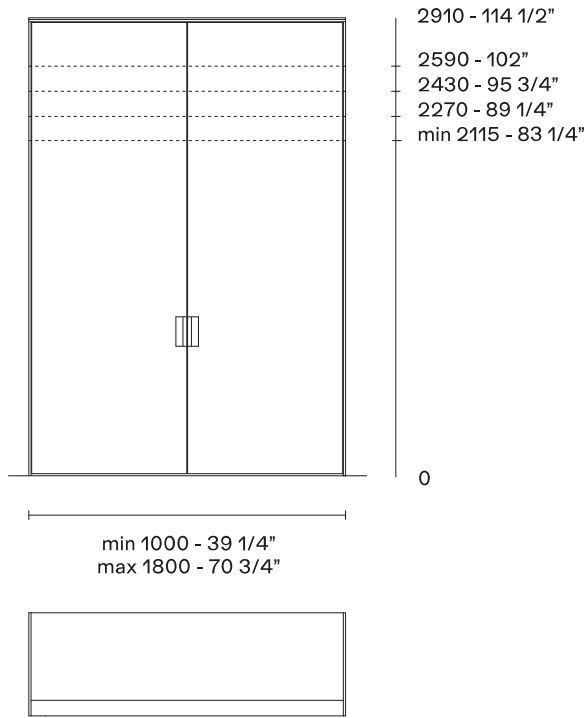

Height and width

Single door

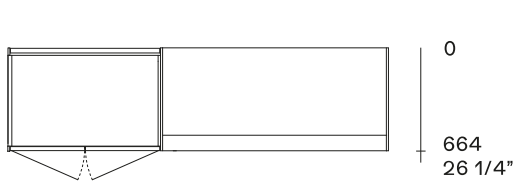

For actual passage opening
deduct 5 1/2"

Double door

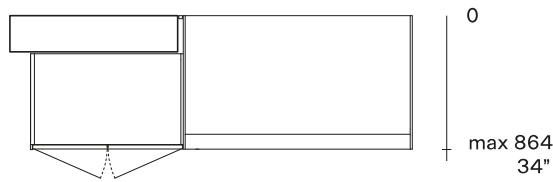

For actual passage opening
deduct 10"
